DETAILED ACTION

Specification -

1. The specification has been checked to the extent necessary to determine the presence of all possible minor errors. However, the applicant cooperation is requested in correcting any errors of which the applicant may become aware in the specification.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 6-11,21-31 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-13 of U.S. Patent 6,707,084. Although the conflicting claims are not identical, they are not patentably distinct from each other. Claims 6-11,21-31 of the present invention is a similar version of the claimed invention in claims 1-13 of the above-identified U.S. Patent with similar intended scope.

Art Unit: 2818

With respect to claims 6-11,21-31 in order to provide an important component for a computer system; It would have been obvious to one of ordinary skill in the art at the time the invention was made to select the memory devices of claims 1-13 disclosed by US patent 6,707,084 to use in computer systems and come up with the invention of the present application since the use of memory devices in a computer system is one of many obvious intended uses.

The rationale can be summarized as the following:

A person of ordinary skilled in the art at the time the invention was made would have been motivated to use the device invented by US patent 6,707,084 in as many computer systems as possible to expand the market for the devices and get more profit.

4. When responding to the office action, Applicants are advised to provide the examiner with the line numbers and the page numbers in the application and/or references cited to assist the examiner to locate the appropriate paragraphs.

Art Unit: 2818

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Prinz (US patent 5,477,482) disclose an Ultra high density, non-volatile ferromagnetic random access memory
